SCOPE OF WORK

Engineering, Consulting, and Construction Management Services Task Order

Professional Engineering Services – 69kv Transmission Line Rebuild Virginia to Ferguson Substation

The primary objective of this task order is to develop plans, specifications, rebuild 2.5 miles of 69 kV transmission line from Virginia to Ferguson Substation. The design shall be reviewed and sealed by a licensed professional engineer.

The deliverables shall include construction specifications, detailed design drawings, material lists, electrical diagrams, and supporting documentation. These documents will be prepared for use by SEU contractors to obtain permits, support bidding efforts, and to carry out construction.

Phase 100 – Project Management

Upon notice to proceed, Halff will schedule (1) initial virtual assessment meeting with the SEU Project Manager to review existing standards and specifications and to discuss desired outcomes. In this meeting, SEU will provide Halff with the necessary information needed to complete the project. The assessment meeting will be 1 hour and have 2 members of the Halff team in attendance. Documentation of assessment meetings shall include Halff's understanding of the deliverables.

Halff will schedule (2) virtual project update meetings throughout the project with the SEU Project Manager to provide updates and resolve any conflicts. Each meeting will be 1 hour and have 2 members of the Halff team in attendance.

Halff will schedule a 60% deliverable review virtual meeting with the SEU Project Manager, followed by a 90% deliverable review virtual meeting, and a final (sealed) deliverable review virtual meeting, a total of **(3) deliverable review virtual meetings**. Each meeting will be 1 hour and have 2 members of the Halff team in attendance.

Additional meetings that SEU calls will be billed at a Time and Expense rate. Additional meetings that Halff calls will not be billed, unless agreed to by SEU staff.

Phase 100 Deliverables:

Phase 200 – Plans, Specifications for Rebuild 69 kV Transmission Line Virginia to Ferguson (~2.5 miles)

Halff will create engineering design and construction specifications that include components to support bidding and construction of Phase 200 - Rebuild 69 kV Transmission Line that runs from Virginia Ave to Ferguson Station (~2.5 miles). Design will include 795 ACSR with steel poles and inclusion of single-circuit and double-circuit distribution underbuilds that parallel the transmission line.

Design and specifications will align with SEU's standards, operational requirements, standards for safety, accessibility, and sustainability.

The submittals will be provided in electronic PDF format and shall comply with the SEU site plan permit requirements. Halff will provide a 60%, 90%, and final sealed design.

- Bill of Materials at 90% and final deliverable
- Statement of Work at 90% and final deliverable
- Design Basis Document (Including data from Geotech and SUE)

Any tasks not explicitly outlined in the above scope of services are excluded and may be provided under a separate authorization with a commensurate fee.

End of Tasks

Project Exclusions:

- Environmental Services
- Traffic Control Plans (Included in construction contract)
- Permitting and Site Plan approvals
- Any design of off-site elements
- Foundations are not expected on this design. If it is determined that foundation is required, this will be considered an additional services.
- Preparation of inter-local or other agreements among affected entities
- Coordination with third parties not identified in this agreement
- Any services required due to changes in codes, regulations, or stakeholder requirements after the effective date.

Project Assumptions:

- The scope of work includes design revisions required for one round of review by authorities having jurisdiction or stakeholders. Additional revisions shall be considered additional services.
- Project anticipates a not-to-exceed 4-month total duration from Notice to Proceed to final sealed design deliverable.
- Some areas along the ROW may require temporary composite matting following rain events to minimize property damage by construction equipment and mitigate the need for more costly post-construction restoration. If required, this will be the construction contractor's responsibility.
- The use of two-piece light-duty (wood-pole equivalent) steel poles will limit construction to regular bucket trucks, most likely eliminating the need for temporary construction easements. If required, this will be the construction contractor's responsibility.
- If a hotline tag on the OG&E line is needed when working on OG&E structures, this will be the construction contractor's responsibility.

- Based on experience, the use of gravel or stone backfill will be more effective than native spoils for direct-embed structures due to the likelihood of poor soils. If required, this will be the construction contractor's responsibility.
- Traffic control plans must be prepared, coordinated with the local transportation department, and implemented to improve safety during construction at construction areas near roadways. This will be the construction contractor's responsibility.
- Contingency fees will be as approved and capped at 10% of the total project phase cost.

Task Order Fee:

This task order fee shall be a Lump Sum and is only subject to adjustment if the Scope of Work is revised by SEU and agreed to by all parties. The task order fee for this project is as follows:
